Can-Am Outlander 800R X mr

Used as a Hunting and camping vehicle, added a WARN wench to the rear and has hitch receptacle on front.

Features and Benefits

The mud rider demands a different kind of performance from his ATV; BRP's Can-Am Outlander 800R EFI X mr delivers. That is why BRP worked with one of the most famous names in ATV mud performance to develop the Can-Am Outlander X mr: Gorilla Axle. The X mr starts with the longer wheelbase of the Outlander 800R MAX platform for performance in the deepest mud; then adds a host of features specific for the mud rider. The radiator is relocated to the front rack, keeping it high up on the ATV and out of the mud and water. Next the CVT intake, CVT exhaust and engine air intake are located as high in the machine as possible to keep mud and water out of important components to keep the rider going in the toughest conditions. Then Can-Am added a complete air-controlled suspension system allowing the rider to dial in their preferred ride height: high for getting to the mud hole and lower for riding to and from the mud. This means one does not have to sacrifice ride comfort,

for the additional height needed to get through the mud hole. It also has a mud rack, complete set of oversized shocks and mud tires. Can-Am has premium
